

BILIBLUELIGHT PHOTOTHERAPY LAMP

The Bilibluelight Phototherapy Lamp is a compact, lightweight solution for the effective treatment of neonatal jaundice.

Combining advanced LED technology with a user-friendly design, the Bilibluelight helps healthcare professionals deliver safe, reliable care in busy neonatal settings.

Designed to support clinical teams with fast, reliable operation, a single button control ensures consistent phototherapy delivery, minimising training needs and eliminating staff confusion.

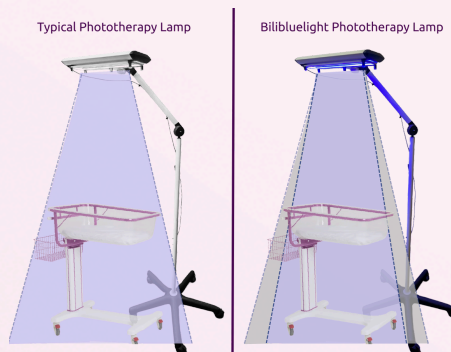

Ultimately, its lightweight, modern design makes it easy to handle, reposition and store - helping staff save time and work more efficiently during neonatal jaundice treatment.

ENERGY EFFICIENT CARE

Delivers powerful neonatal phototherapy using just 17 watts - matching 100-watt systems whilst cutting energy costs and environmental impact.

It runs 40 times longer than CFL units, generates no heat and features a blink alert at the end of its 40,000-hour service, offering a sustainable, cost-efficient solution.

MINIMISED LIGHT POLLUTION

A great addition to a nurturing environment, the Bilibluelight's innovative design minimises light pollution.

Light is concentrated directly on the infant for the most effective phototherapy treatment without disturbing mothers, staff or other patients in shared bays.

ADVANCED TECHNOLOGY

The Bilibluelight delivers powerful, precisely tuned phototherapy for effective, even treatment of neonatal jaundice.

Compact yet high-performing, it combines a closed, protected design with a durable aluminium and glass fibre-reinforced casing to ensure safety, reliability and lasting quality.

VERSATILE IN BUSY ENVIRONMENTS

From incubators to cots, the Bilibluelight adapts seamlessly to any setup, providing the ideal solution for jaundice treatment. Secure micro suction feet hold it firmly in place, and an optional mobile stand adds easy mobility with smart cable management.

Purpose-built for busy clinical teams, it keeps care **safe, efficient,** and **effortless.**
