

CROYDE LED WALL PANELS

LED Wall Panels help to create a more welcoming, relaxed environment in clinical settings - reducing feelings of stress and anxiety for patients, visitors and staff members.

Croyde LED Wall Panels appear visually captivating in any room.

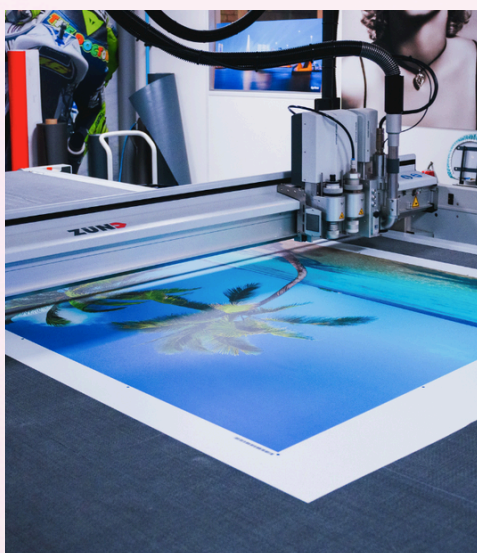

They are backlit and dimmable, offering an interchangeable mood effect to best promote wellness and relaxation. Available with a wide range of images, this gives you full control over the desired atmosphere you wish to create.

There is also the option to configure them in conjunction with the Croyde LED Sky Panels, allowing you to create a fully immersive floor to ceiling panoramic image display.

CLINICAL AREAS

Our LED Wall Panels can transform any clinical setting to immediately open up the space and create a more relaxed environment. Taking blank walls and converting them to serene havens, they work wonders to put patients' nerves at ease.

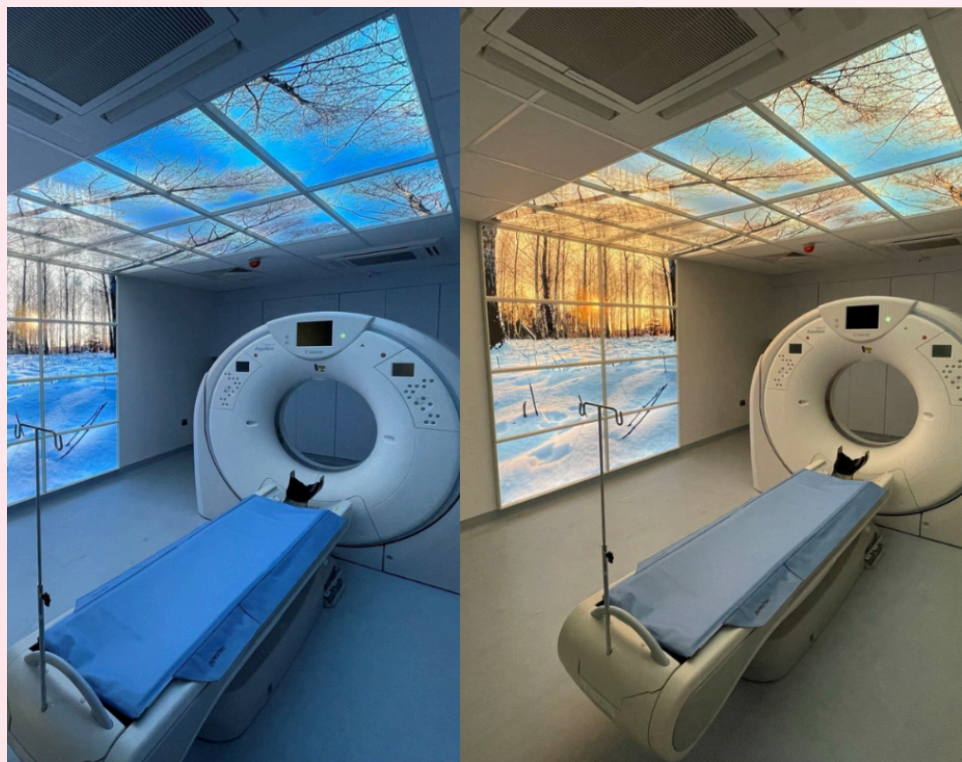

HIGH RESOLUTION IMAGERY

We use carefully selected, high-resolution imagery to create true to life scenes. The use of specialist UV-pigmented ink then ensures our colour tones stand the test of time. This allows our LED Wall Panels to appear incredibly realistic.

FULLY INTEGRABLE

There is also the option to configure our LED Wall Panels in conjunction with the Croyde LED Sky Panels. This allows you to create a fully immersive floor to ceiling panoramic image display - an especially effective option for MRI rooms.

HUMAN CENTRIC LIGHTING

Additional human centric lighting options are available to allow patients and staff to control the temperature of the images displayed.

This system can also be automatically programmed to simulate the daily light cycle of dawn to dusk that regulate circadian rhythms, which brings about positive effects on comfort and health, whilst also encouraging recovery.
