PELVIBALL

The Pelviball birthing ball can be used on its own or in conjunction with our [Multitrac](#) or [Duoetto](#) birthing systems.

The Pelviball can be used during active and upright labour to help the birthing person find their most comfortable positions.

When combined with the Multitrac or Duoetto birthing system the Pelviball allows for even more positioning options.

It has an anti-burst design for additional peace of mind during usage and is easy to top up with air as required.

BIRTH PARTNER ENGAGEMENT

When paired with a birth system, the woman can sit on the Pelviball whilst her partner can sit on the chair behind, and be at the same height. This allows the partner to be close and engaged.

STABILITY

The Pelviball is attached to a base plate to offer maximum stability and security during labour, whilst also preventing it from inadvertent rolling.

EASY TO CLEAN

Both the ball and the base plate are easy to clean between uses. They can be wiped down using hospital approved cleaning solutions or wipes.

OPTIONAL COVERS

Optional covers are also available with both disposable and washable versions. These covers provide a comfortable barrier between skin and surface, to help reduce skin irritation and sweating.
